

Mobile consolidation on Denmark's doorstep

Will consolidation lead to higher consumer prices for mobile internet access in Denmark as it did in the Austrian and German markets?

Rewheel / Digital Fuel Monitor premium research note, 16th December 2014

In this report we take a first look at the current state of competition in the Danish mobile market ahead of the proposed merger between Telenor and TeliaSonera and frame the key area of concern where competition will be impeded: **the price of mobile internet access**. We will follow up this initial analysis and present our detailed views regarding effective merger remedies, if any, soon after the Commission has issued the Statement of Objections.
